

STAGE 3 HAIR REGROWTH KIT — MASTER BRIEF

Man Matters | Internal Truth Document for PDP Scoring

TAB 1: PRODUCT BRIEF

PRODUCT BRIEF — S3 HAIR REGROWTH KIT

Kit Contents

The S3 Hair Regrowth Kit contains two products:

- **Minoxifin** — 5% Minoxidil + Finasteride (Alcohol-Free Topical Solution)
- **Biotin Gummies** — Biotin + Zinc + Vitamins A, C, E (No Added Sugar, Vegan)

1. Key Ingredients

MINOXIFIN — TOPICAL SOLUTION

Ingredient	What It Does
Minoxidil (5%)	Increases blood flow to hair follicles. Delivers more nutrients to dormant follicles. Extends the anagen (hair growth) phase. Reactivates suppressed follicles.
Finasteride	Blocks DHT — the #1 hormonal cause of male pattern hair loss. Stops hair loss at the root cause level.

BIOTIN GUMMIES

Ingredient	What It Does
Biotin	Supports keratin production — the structural protein hair is built from.
Zinc	Essential for hair tissue repair and growth cycle regulation.
Vitamin A	Supports sebum production. Keeps scalp nourished and follicles active.
Vitamin C	Antioxidant. Supports collagen synthesis for scalp health.
Vitamin E	Improves scalp blood circulation. Reduces oxidative stress on follicles.

2. What Is Not In It

No alcohol	Alcohol-free topical solution. No dryness, no flaking, no scalp irritation. Unlike standard pharmacy minoxidil.
No added sugar	Gummies contain no added sugar. No glucose spike.
Vegan	No animal-derived ingredients in the gummies.

Non-sticky	Water-based formula. Comfortable for daily use. No residue or greasiness.
-------------------	---

3. How It Works — Dual-Action Protocol

Layer	Mechanism
Topical — Minoxifin	Finasteride blocks DHT production at the scalp level. Minoxidil increases blood supply to dormant follicles and extends the active growth phase.
Internal — Gummies	Biotin, Zinc, and Vitamins A, C, E nourish follicles from within. Supports keratin structure and overall scalp health.

The critical scientific truth: At Stage 3, follicles are not dead. They are dormant — suppressed by DHT and starved of blood flow. Minoxidil reactivates them. Finasteride removes the hormonal signal that has been shutting them down. Both levers must be pulled simultaneously for bald-patch reversal.

4. How to Use

MINOXIFIN (TOPICAL SOLUTION)

- Apply **1 ml (4 sprays)** on affected areas: temples, hairline, crown
- Massage gently with fingertips for **1-2 minutes**
- Let dry for **10-15 minutes** before styling
- Use **twice daily** — morning and night
- Always apply on **dry, clean scalp** — wet or oily hair significantly reduces absorption

BIOTIN GUMMIES

- Take **1 gummy daily**
- Any time of day, with or without food

5. Treatment Timeline

Period	What Happens
Month 1-2	Hairfall reduces. Some users experience a temporary shedding phase in weeks 2-6. This is normal — old, weak hair makes way for stronger new hair. It is a sign the treatment is actively working. Do not stop.
Month 3-4	Regrowth begins. Baby hair visible on previously thinning areas and bald patches. Crown and hairline start to fill in.
Month 5-6	Hair gets thicker and denser. Visible improvement across crown and thinning zones.

Important: Results require consistent daily use for 5-6 months. If treatment stops, hair loss may resume. Consistency is not a bonus — it is the entire protocol.

6. Clinical Proof and Trust Signals

Claim	Detail
93% success rate	93% of users on the complete doctor-guided protocol see visible results in 5–6 months.
10 lakh+ men	Trusted by over 10 lakh men across India.
Doctor-recommended	Every Man Matters protocol is prescribed and monitored by a qualified dermatologist.
FDA-approved actives	Minoxidil and Finasteride are FDA-approved molecules for male pattern hair loss.
Clinically proven	Clinically tested formulation. Dermatologist-recommended.
Alcohol-free	No alcohol — no dryness, no scalp damage that disrupts daily use.
Designed for men	100% men's brand. Every product, protocol, and clinical reference is built for Indian male physiology.

7. S3 Kit vs Oils / Shampoos / Trial & Error

	S3 Regrowth Kit (Man Matters)	Oils / Home Remedies / Anti-Hairfall Shampoos
Active molecules	Finasteride + Minoxidil. FDA-approved. Clinically proven for bald-patch reversal.	No clinically proven actives. No DHT blocking. No follicle reactivation.
Mechanism	Dual-action: blocks root hormonal cause (DHT) and simultaneously reactivates dormant follicles.	Surface-level. Cannot penetrate to follicle depth. Cannot reverse Stage 3 crown loss.
Doctor involvement	Doctor consultation included. Protocol personalised, prescribed, and monitored.	Self-prescribed. No diagnosis. No monitoring. No accountability.
Timeline	Clear milestones: Month 1-2 hairfall reduces → Month 3-4 regrowth → Month 5-6 thicker hair.	No predictable timeline. Months or years of trial and error with no result.
Bald patch reversal	Designed specifically for crown and bald-patch reversal. Appropriate for Stage 3.	Cannot restore what is already visibly gone. Not designed for this.

8. S3 Kit vs Traya

	Man Matters S3 Kit	Traya
Core active		

	Man Matters S3 Kit	Traya
	Minoxidil + Finasteride. FDA-approved. Dual-action DHT block + follicle reactivation.	Redensyl + Ayurvedic herbs + standard minoxidil. No Finasteride. No direct DHT blocker.
DHT blocking	Finasteride directly blocks DHT — the primary hormonal cause of Stage 3 male hair loss.	Ayurvedic approach. No pharmacological DHT block.
Delivery	Alcohol-free. Water-based. Non-sticky. Comfortable for daily twice-application.	Standard topical. No advanced delivery.
Protocol complexity	2 products. Simple routine. Twice-daily spray + once-daily gummy.	5+ products per day: pills, nasal drops, oils, diet changes. High compliance friction.
Doctor vs Coach	Qualified dermatologist. Full diagnosis, prescription, follow-up, personalised milestone map.	Hair coach — not a doctor. Algorithm-driven.
Brand focus	100% men. Built for Indian male physiology. Every clinical test on Indian men.	Unisex brand. Serves men and women. Diluted identity.

TAB 2: PERSONA

PERSONA — S3 HAIR REGROWTH KIT

Arjun

Working Professional · Brand-Burned Researcher · 22 to 34 · Tier 1 and Tier 2

"Sab try kar chuka hu. Oils, shampoos, ek brand bhi. Kuch nahi hua. Ab seriously soch raha hu ki transplant hi karwa lun."

DEMOGRAPHICS

Age	22–34. Sweet spot 26–32. Old enough for crown loss to be undeniable, young enough to feel it acutely.
Occupation	Private sector ~40%, Students ~28%, Business/freelance ~12%. Output-driven. Spends most of his day in professional settings where appearance matters.
City	Tier 1 and large Tier 2. Works in environments — offices, campuses, events — where the crown is visible in photos and meetings.
Hair condition	Crown + frontal loss visible. Bald patches present. 78% reduced density. Not mild thinning — loss that is visible to others, not just himself.
Doctor visit rate	41% visited a dermatologist before Man Matters. More clinically minded than Stage 2 buyers. Has already started forming expectations about what "good" treatment looks like.
Kit purchase	61% buy the full kit. Ready to invest seriously if the product earns trust. 31% buy partial (high churn risk — gummies alone will not restore bald patches).

PSYCHOGRAPHICS

Identity	He defines himself through competence and presence. At 28–32, the crown loss is no longer something he can explain away. Every meeting, every group photo, every time someone sees him without a cap — it registers. Not just to him.
Core emotional driver	Not vanity. Confidence. He does not want to look perfect — he wants to stop feeling like his hair is the first thing people notice about him. 72% cite confidence as the #1 emotional driver. Crown loss rates 7.2/10 on emotional distress — the highest in the hair loss cohort.
The trigger moment	

	Mirror shock. Group photo. Someone pointing it out. Not a slow realisation — a specific, jarring moment where the gap between how he feels inside and what he sees outside became undeniable.
What he has already tried	Home oils: coconut, onion, castor. Anti-hairfall shampoos. Possibly one D2C brand (Thriveco, or Traya). All failed. The category has already disappointed him once. He knows shampoos cannot fix this. He is done with guessing.
Research behaviour	High. Before buying, he watches YouTube month-3-to-6 journey videos, asks Gemini to compare Man Matters vs Traya, reads comment sections, looks for before/after on real bald patches. He is not an impulse buyer. He needs to be convinced, not just interested.
Transplant consideration	8% of Stage 3 buyers actively research transplants as a parallel option. He is approaching that crossroads. Man Matters needs to intercept before he concludes surgery is the only remaining answer.
His single biggest fear	That it is too late. That Stage 3 means the follicles are gone forever. That 5–6 months of daily effort will lead to nothing. This fear, if left unaddressed on the PDP, kills the purchase.

WHAT DRIVES HIM TO BUY

Primary driver	Reversal. Not preservation — regrowth. Bald patches pe baal wapas chahiye. 70% cite this as their primary goal. He is not looking to slow the loss. He wants to undo it.
Secondary driver	The promise of a doctor and a real protocol. Free doctor consultation = the #1 reason 60% chose Man Matters. NPS promoters cite "Doctor consultation helpful" as the single biggest reason they would recommend.
Purchase trigger	Sees a friend or family member's visible bald-patch result (35%). Finds the ad + reviews loop credible enough (35%). Believes Man Matters' full system — topical + nutritional + doctor — is the right approach (25%).
Conversion journey	LONG. Instagram ad → YouTube research → Gemini/ChatGPT comparison → comment section validation → friend proof → doctor promise. Single-step ad does not convert this buyer.
Primary research channels	Instagram (discovery) → YouTube journey videos, month 3–6 (research) → Gemini/ChatGPT brand comparison (validation) → friend or known result (closer).

WHAT MAKES HIM CHURN

Barrier 1 — Most critical	Shedding panic in Month 1–1.5. He was not warned. Hair appears to be falling faster. He concludes the product is making things worse and stops — at exactly the moment the treatment is working. This is the #1 self-inflicted churn event for Stage 3 buyers.
Barrier 2	No visible bald-patch result by Month 3. Bald-patch regrowth requires Month 4–5. Without a clear milestone map, he concludes the treatment has failed at the

	exact point it is about to deliver. 60% cite "results too slow" as their primary frustration. 58% rate the product 1–2/5 at this point.
Barrier 3	Doctor quality inconsistency. "Doctor timeline baar baar badha deta hai." Vague or inconsistent consultations collapse trust. 25% of Stage 3 buyers flag this.
Barrier 4	Consistency failure. Twice-daily application every day is a new habit. Without a ritual anchor, gaps appear. In hair regrowth, a break in the habit is a break in the results.
Barrier 5	Cost anxiety over 6-month protocol. 25% flag cost. Gets sharper when no visible progress exists to justify continued spend.
Transplant exit	8% who do not see early progress begin actively researching transplants. Once in transplant-research mode, extremely difficult to reactivate.

REASONS TO BELIEVE

RTB 1	FDA-approved actives. He has been burned by products that sound scientific but aren't. Minoxidil + Finasteride are pharmaceutical-grade, clinically validated molecules — not ingredients dressed up in scientific language.
RTB 2	Doctor consultation included. The dermatologist creates the diagnosis and milestone map he needs to trust the protocol. Doctor trust scores 60% as a purchase driver for Stage 3.
RTB 3	93% success rate with consistent use. A specific, credible number — not "most users improve" but a measurable claim.
RTB 4	Alcohol-free formula. Addresses the scalp comfort issue that made generic pharmacy minoxidil unusable before. Daily twice-application becomes sustainable.
RTB 5	10 lakh+ men. Social proof at scale. If this many Indian men are using it and coming back, it works.
RTB 6	"Stage 3 is NOT too late." His single biggest psychological barrier is the belief that bald follicles are permanently dead. This must be addressed directly and early.

COMMUNICATION

Frame	You have tried hard. The products failed you — not because you were inconsistent, but because they were never capable of solving Stage 3 hair loss. Your follicles are not gone. They are waiting.
Primary hook	"Itna try kar chuka hai — oils, shampoos, ek brand bhi. Kuch nahi hua. Kyunki woh products is problem ko solve hi nahi kar sakte the."
Tone	

	Part peer-to-peer ("I went through this exact journey"), part evidence-led ("here is what happens month by month and why"). He is a researcher. He respects both lived experience and clinical proof.
Claim sequence	(1) Stage 3 is reversible — follicles are dormant, not dead. (2) Dual-action: Finasteride blocks DHT, Minoxidil reactivates dormant follicles. (3) Doctor-led protocol — diagnosed, prescribed, monitored. (4) Clear timeline — Month 1-2 hairfall reduces → Month 3-4 regrowth → Month 5-6 thicker.
What to say	Bald-patch reversal. FDA-approved molecules. Dual-action protocol (Finasteride + Minoxidil). Free doctor consultation with milestone map. 93% success. Shedding in Month 1 is normal — it is a sign the treatment is working. 10 lakh+ men.
What NOT to say	Body shaming. Shaming bald men. Bad taste framing of any kind. Competitor brand names. "Guaranteed results." "Works in 30 days." "Cure." Fake before/after. Unrealistic promises. Transplant fear-mongering. Wet hair application framing.
Comparison angle	vs random products (oils, shampoos, trial and error cannot fix Stage 3 — they have no active molecule for DHT blocking or follicle reactivation). vs Traya approach (Ayurvedic vs clinical, hair coach vs real doctor, complex routine vs simple 2-product protocol). Compare approach, never name the brand.

RETENTION MESSAGES

Day	Message
Day 1	"In Month 1, you may notice more hair fall than usual. Do not stop. This is minoxidil shedding — old, weak hair making way for stronger new hair. It means the treatment is actively working. The men who push through Month 1 are the ones who see visible regrowth at Month 5."
Day 7	"That extra shedding? That is the protocol doing its job. Weak follicles clearing out. New growth begins underneath. Most men who stop here never find out what Month 4 looks like. Apply twice daily. Stay consistent."
Day 21	"3 weeks in. The men who see visible regrowth by Month 5 are the ones who never skipped a day in Month 1. You are building the habit right now. That is the real work. [Social proof: X lakh men are on this exact routine.]"

TAB 3: NARRATIVE × PERSONA

NARRATIVE — S3 HAIR REGROWTH KIT

NEVER MENTION

Body shaming · Shaming bald men · Bad taste framing of any kind · Competitor brand names (compare approach and category, never name a brand) · "Guaranteed results" · "Works in 30 days" · "Cure" · Fake transformations · Unrealistic before/after · Transplant fear-mongering · Wet hair application

NARRATIVE 1: REGROWTH / REVERSAL

Arjun — Working Professional · 22 to 34 · Tier 1 and Tier 2

He can see the bald patch. It has been there for over a year. He has tried oils for six months — nothing changed. He knows now that shampoos cannot fix this. He is not looking for prevention anymore. He wants what he lost back. He has almost convinced himself it is too late to get it.

JTBD	He wants to see baby hair on his bald patch. Not "reduced hairfall." Not "thicker elsewhere." The specific visual of new growth on the crown. That is the purchase.
Hook Options	• "3 saal se baal gir rahe hain. Soch liya tha ab wapas nahi aayenge. Galat tha." • "Crown pe patch tha — hat nahi raha tha. Mujhe bhi nahi pata tha follicles abhi bhi wahan hain, sirf dormant hain."
Mandate	Framing: Stage 3 is reversible. Follicles are dormant, not dead. Show the crown journey — month 3-4 baby hair, month 5-6 visible regrowth. Before/after on real bald patches, not just hairline. Product: Finasteride blocks DHT (root hormonal cause). Minoxidil reactivates dormant follicles. Dual-action. Doctor consultation sets the milestone map from Day 1. Dosage: 4 sprays twice daily (morning + night) on dry scalp + 1 gummy daily. 5–6 months.
Add-on	93% success on the complete protocol. 10 lakh+ men. Doctor consultation included — not algorithm-assigned, but diagnosed and monitored.

NARRATIVE 2: IT'S NOT TOO LATE

Arjun — Working Professional · 22 to 34 · Tier 1 and Tier 2

He has quietly accepted that his bald patches are permanent. He tells himself it is genetic. He is beginning to consider whether a transplant makes more sense than wasting another six months on a product that will not work. He does not know that his follicles are not dead — they are dormant and can be reactivated.

JTBD	He needs to understand, in concrete biological terms, that the window has not closed. Stage 3 bald patches can reverse because the follicles are not gone — they are suppressed by DHT and starved of blood flow. Both are fixable.
Hook Options	• "Sab ne bola tha — Stage 3 ke baad kuch nahi hota. Galat hai. Follicles dead nahi hote. Sirf dormant hote hain." • "Main transplant ke baare mein soch raha tha. Phir samjha — follicles abhi bhi wahan hain. Unhe sirf reactivate karna tha."
Mandate	Framing: Address the "too late" belief head-on, early. Keep the biology simple — Minoxidil does not create new follicles, it reactivates the ones already there. At Stage 3 those follicles are dormant, not dead. Finasteride removes the DHT that has been suppressing them. Product: Finasteride (blocks DHT) + Minoxidil (reactivates dormant follicles). FDA-approved. Dermatologist-recommended. Dosage: 4 sprays twice daily + 1 gummy daily. Consistent use for 5–6 months.
Add-on	Doctor consultation builds a personalised milestone map: Month 1-2 hairfall reduces → Month 3-4 baby hair visible → Month 5-6 visible regrowth. 93% of users on the complete protocol see results.

NARRATIVE 3: THE RIGHT PROTOCOL (vs Random Trial & Error)

Arjun — Working Professional · 22 to 34 · Tier 1 and Tier 2

He has done the rounds. Coconut oil. Onion oil. Castor oil. Anti-hairfall shampoos. Six months of effort. None of it touched the bald patch. He knows intellectually that shampoos do not regrow hair. But nobody explained to him why — and without understanding why, he does not know what will actually work.

JTBD	He needs to understand WHY everything before failed — and why this is categorically different. Not just a better product. A completely different approach to the problem.
Hook Options	• "Onion oil, castor oil, anti-hairfall shampoo — sab try kiya. Kyunki koi nahi bataya tha ki yeh cheezein Stage 3 mein kaam hi nahi kar sakti. DHT toh band nahi hota oil se." • "Shampoo baal dhota hai. DHT nahi rok sakta. Minoxidil follicle reactivate karta hai. Yeh wahi karta hai jo baaki sab nahi karte the."
Mandate	Framing: Product education without condescension. He tried hard — the products failed him, not the other way around. DHT is the hormonal root cause of Stage 3 male hair loss. Oils and shampoos have no mechanism for blocking DHT. They have no FDA-approved active molecule for follicle reactivation. Minoxidil does both simultaneously. Product: Finasteride blocks DHT at the root. Minoxidil increases blood flow and extends the growth phase. Two molecules. One product. Doctor-prescribed. Dosage: 4 sprays twice daily + 1 gummy daily. 5–6 months of consistent use.
Add-on	Alcohol-free. Non-sticky. Water-based. Daily twice-application comfort that actually makes the habit sustainable. Doctor consultation included.

NARRATIVE 4: VS TRAYA APPROACH

Arjun — Working Professional · 22 to 34 · Tier 1 and Tier 2

He found Traya while researching. It looks clinical. They have a hair coach. They have a whole system. He either tried it and found it too complex to maintain, or he is currently running a side-by-side comparison on Gemini or YouTube. He wants the most clinically rigorous option — not the most Ayurvedic one. He is sceptical that herbs are going to fix a Stage 3 crown.

JTBD	He wants to know he is choosing the more clinically grounded option. He is comparing at the ingredient level. He needs to understand why FDA-approved pharmacological molecules are a stronger foundation than Ayurvedic actives for Stage 3 — and why a dermatologist is more credible than a hair coach.
Hook Options	• "Hair coach nahi chahiye — ek doctor chahiye. Jo diagnose kare, prescribe kare, follow-up kare. Yahi fark hai." • "Finasteride DHT directly block karta hai. Herbal approach yeh nahi karta. Stage 3 ke liye clinical solution chahiye — traditional nahi."
Mandate	Framing: Clinical versus Ayurvedic. Both claim "holistic." Man Matters means: doctor diagnoses root causes and prescribes clinically proven pharmaceutical molecules. The alternative means: Ayurveda and supplements guided by a coach. At Stage 3, the severity warrants pharmacological precision, not a broad-spectrum holistic approach. Never name competitor brands. Compare by approach: "clinical vs Ayurvedic," "dermatologist vs hair coach," "2-product protocol vs 5+ products per day." Product: Minoxidil + Finasteride (FDA-approved). Alcohol-free. Doctor-led — diagnosis, prescription, milestone map, follow-up. Simple: 2 products, twice daily + once daily. No nasal drops, no 5+ product regimen, no diet overhaul. Dosage: 4 sprays twice daily + 1 gummy daily. 5–6 months.
Add-on	93% success. 10 lakh+ men. Doctor consultation personalised and monitored — not algorithm-driven. 100% men's brand — every product, every clinical test, every protocol built for Indian men.

Document compiled from: S3 Influencer Brief, Hair ICP Insights (S3), Man Matters Hair Regrowth Brand Positioning. Internal use only.
