

ADVANCED HAIR REGROWTH REGIME — MASTER BRIEF

Man Matters | Internal Truth Document for PDP Scoring

TAB 1: PRODUCT BRIEF

PRODUCT BRIEF — ADVANCED HAIR REGROWTH REGIME

Kit Contents

The Advanced Hair Regrowth Regime contains three products:

- **Minoxifin Advance** — 5% Minoxidil + 0.1% Finasteride with CETOSOMAL® Technology (Alcohol-Free)
- **Biotin Gummies** — Biotin + Zinc + Vitamins A, C, E (No Added Sugar)
- **Dermaroller (0.5mm)** — 540 Titanium Alloy Micro-Needles

1. Key Ingredients

MINOXIFIN ADVANCE — TOPICAL SOLUTION WITH CETOSOMAL® TECHNOLOGY

Ingredient	What It Does
Minoxidil (5%)	Increases blood flow to hair follicles.
Finasteride (0.1%)	Blocks DHT — the #1 hormonal cause of male pattern hair loss. Stops hair loss at the root cause level.
CETOSOMAL® Carrier	Patented delivery carrier. Drives Minoxidil 2–3x deeper into the scalp. Delivers 44% more active Minoxidil to the hair follicle compared to alcohol-based solutions.
Hydrating Agents	Embedded in the CETOSOMAL® formulation. Eliminate scalp dryness, redness, and itching associated with alcohol-based topicals. Improve tolerance and daily adherence.

BIOTIN GUMMIES

Ingredient	What It Does
Biotin	Supports keratin production — the structural protein hair is built from.
Zinc	Essential for hair tissue repair and growth cycle regulation.
Vitamin A	Supports sebum production. Keeps scalp nourished and follicles active.
Vitamin C	Antioxidant. Supports collagen synthesis for scalp health.
Vitamin E	Improves scalp blood circulation. Reduces oxidative stress on follicles.

DERMAROLLER

Specification	Detail
Needle count	540 micro-needles
Material	Titanium alloy
Needle depth	0.5mm
Function	Creates micro-channels in the scalp surface. Activates dormant follicles. Stimulates blood circulation. Improves topical absorption when Minoxifin Advance is applied after use.

2. What Is Not In It

No alcohol	The CETOSOMAL® carrier is entirely alcohol-free. No dryness, no flaking, no scalp irritation or redness. Unlike standard alcohol-based minoxidil topicals on the market.
No added sugar	Gummies contain no added sugar.

3. How It Works — Triple-Action Protocol

Layer	Component	Mechanism
Topical (Follicular Delivery)	Minoxifin Advance + CETOSOMAL®	CETOSOMAL® drives Minoxidil 2–3x deeper into the scalp, delivering 44% more active ingredient to the hair follicle vs alcohol-based solutions. Finasteride blocks DHT. Alcohol-free with hydrating agents.
Internal (Systemic Support)	Biotin Gummies	Biotin, Zinc, and Vitamins A, C, E nourish follicles from within. Supports keratin structure and overall scalp health. Works in parallel with the topical layer.
Mechanical (Channel Creation)	Dermaroller	540 titanium needles create micro-channels in the scalp before topical application. Activates dormant follicles. Stimulates blood circulation. Enhances absorption of the topical.

The critical scientific truth: The three mechanisms are synchronized. The Dermaroller opens channels — Minoxifin Advance with CETOSOMAL® penetrates deeper via those channels — Gummies support follicular health from within. No single-lever approach can match this. It is a protocol, not a product.

4. How to Use

MINOXIFIN ADVANCE (TOPICAL SOLUTION)

- Apply 1 ml on affected areas: temples, hairline, crown

- Massage gently with fingertips for **1–2 minutes**
- Let dry before styling
- Use **twice daily** — morning and night
- Always apply on a **dry, clean scalp** — wet or oily hair reduces absorption

BIOTIN GUMMIES

- Take **1 gummy daily**
- Any time of day, with or without food

DERMAROLLER

- Use **once a week** — on a clean, dry scalp
- Roll gently in **three directions**: horizontal, vertical, diagonal
- Apply Minoxifin Advance **immediately after** dermarolling to maximise channel-absorption
- Clean the roller head after each use. Replace every 2–3 months.

5. Treatment Timeline

Period	What Happens
Month 1–2	Hairfall may start to reduce. Some users experience a temporary shedding phase in weeks 2–6 — old, weak hair makes way for stronger new growth. This is normal and expected. It is a sign the treatment is actively working. Do not stop.
Month 3–4	Hairfall reduces further. Baby hair may start appearing on thinning areas.
Month 5–6	Hair gets thicker and denser. Visible regrowth across crown and thinning zones.

Important: Results require consistent daily use for 5–6 months. If treatment stops, hair loss may resume. Consistency is the protocol — not a bonus.

6. Clinical Proof and Trust Signals

Claim	Detail
93% success rate	93% of men on this protocol saw reduced hairfall in 5–6 months of consistent use.
44% more Minoxidil delivered	CETOSOMAL® delivers 44% more active Minoxidil to hair follicles compared to alcohol-based topical solutions.
2–3x deeper penetration	Patented CETOSOMAL® technology drives Minoxidil 2–3x deeper into the scalp vs standard delivery methods.
10 lakh+ men	Trusted by over 10 lakh men across India.
Dermatologist recommended	Every Man Matters protocol is prescribed and monitored by a qualified dermatologist.
	Minoxidil and Finasteride are FDA-approved molecules for male pattern hair loss.

Claim	Detail
Clinically proven ingredients	
Doctor consultation included	Every order includes a doctor consultation — no self-prescribing, no guesswork.
Designed for men	100% men's brand. Every product and clinical reference is built for Indian male physiology.

7. Minoxifin Advance vs Standard Alcohol-Based Minoxidil

	Standard Alcohol-Based Minoxidil	Minoxifin Advance (CETOSOMAL®)
Delivery system	Alcohol-based solution	Patented CETOSOMAL® lipid carrier
Penetration depth	Surface-level — alcohol evaporates before deep penetration	2–3x deeper — lipid carrier does not evaporate
Minoxidil reaching the follicle	Baseline — significant portion lost at surface	44% more active Minoxidil delivered to the follicle
Scalp experience	Dryness, redness, itching common — alcohol strips scalp	Alcohol-free — hydrating agents included. No irritation.
Adherence	Side effects reduce consistency. Many users apply less or skip doses.	Gentler experience supports twice-daily consistent use
Active ingredients	Minoxidil only (in most market products)	Minoxidil 5% + Finasteride 0.1% + CETOSOMAL® carrier
Timeline to result	Slower — delivery ceiling limits effectiveness	More Minoxidil reaches the follicle from Day 1

TAB 2: PERSONA

PERSONA — ADVANCED HAIR REGROWTH REGIME

The Treatment Optimizer

Already in Treatment · Science-Led Buyer · 24 to 35 · Tier 1 and Tier 2

"I've been on Minoxidil for almost a year. Results aren't where I expected. Either the product isn't working or I'm missing something. I'm not starting over — I need to know what's wrong and fix it."

DEMOGRAPHICS

Age	24–35. The core window is 26–32 — old enough for the lack of results to feel serious, young enough to still want a solution.
Treatment history	Already using or having used Minoxidil in some form — topical or oral. 6–15 months in. Past the "starter" phase. Not a first-time hair loss buyer.
Hair loss stage	Stage 2 and beyond. Loss is established and visible to others.
Occupation	Working professionals. Output-driven. Spends time in professional settings where appearance is visible.
City	Tier 1 and large Tier 2. Digitally active. High research intensity before any purchase.
Existing spend	Already spending on hair loss treatment monthly. Knows what it costs. Prepared to invest — but needs a clear, evidenced reason to upgrade.
Doctor visit rate	Higher than first-time buyers. 41%+ have visited a dermatologist. Clinically aware. Familiar with the Minoxidil + Finasteride protocol. Could be an existing MM Minoxidil + Finasteride user post 4–8 months.

PSYCHOGRAPHICS

Identity	He is the person who did the research, made the decision, stayed consistent. He is not a victim of hair loss — he is actively treating it. He takes pride in the protocol. When results fall short of expectation, it does not make him want to quit; it makes him want to find what's missing.
Core emotional driver	Not hope — accountability. He wants to know he has done everything right. Slow results feel like a gap in the system, not a failure of will. That gap is his decision point.

The trigger moment	The moment he realises his current formulation may be sitting on the scalp surface rather than reaching the follicle. Or the point where scalp irritation from alcohol has made daily application inconsistent. Either way: the protocol he built is leaking somewhere.
What he has already tried	Started with oils and shampoos — saw nothing. Moved to evidence-based treatment (Minoxidil ± Finasteride). Has been consistent but results are slower or less visible than expected. Scalp irritation may have reduced adherence.
Research behaviour	Very high. Reads ingredients, looks up delivery mechanisms, asks AI tools to compare formulations. If you show him 44% and 2–3x — he will verify it, and when it checks out, it will convert him. He needs proof, not persuasion.
His single biggest fear	That the months already invested were partially wasted because the formulation was not reaching deep enough. The sunk-cost is not the issue — the idea of having been less effective than possible is.
Transplant awareness	Knows transplant is the last resort. Not there yet. But aware it exists. Man Matters needs to close the loop on why Advanced is the right next step — not the surgeon.

WHAT DRIVES HIM TO BUY

#	Buy Driver
1	The 44% and 2–3x numbers give him a concrete, specific reason to upgrade — not a vague "better" claim
2	CETOSOMAL® directly addresses the hypothesis he already has: medication may be absorbed at the surface, not the follicle
3	Alcohol-free means fewer side effects, which means more consistent adherence — and he knows inconsistency is the biggest protocol killer
4	This is an upgrade, not a restart — his 6–15 months of treatment history compounds, not resets
5	Triple-action closes every gap: follicular delivery + systemic support + mechanical absorption
6	Doctor consultation included removes the risk of changing protocol without medical validation

CHURN BARRIERS

#	Barrier	What Is Really Happening
1	"CETOSOMAL® sounds like a marketing term"	Delivery technology skepticism — new terms feel like buzzwords until the underlying numbers are given. He needs the mechanism explained, not just named.
2		Fear that a different formulation means more scalp damage or more aggressive chemistry. The alcohol-

#	Barrier	What Is Really Happening
	"More advanced might mean more side effects"	free benefit must be stated explicitly — 'advanced' must not read as 'stronger'.
3	"Minoxidil is Minoxidil — why pay for delivery?"	Commodity mindset. He treats the active ingredient as equivalent across products. The absorption gap data is the only thing that breaks this frame — he needs to see that delivery changes outcomes, not just comfort.
4	"My doctor didn't mention this"	Authority bias. He built his protocol with a doctor. Changing it without that endorsement feels risky. Dermatologist-recommended + included consultation directly addresses this.
5	"What if switching causes a new shedding phase?"	Transition anxiety. He does not want to lose progress. He needs to know this is an upgrade to the same molecule — same Minoxidil, better path, not a new drug.
6	"What if it disrupts my current routine?"	Switching cost anxiety. A new applicator, a new texture, a new sequence with the dermaroller — any complexity that is not addressed feels like risk.

REASONS TO BELIEVE (RTBS)

1. 44% more Minoxidil reaches the hair follicle — measurable, specific, patented
2. 2–3x deeper penetration — the mechanism is explained, not just claimed
3. Alcohol-free: directly addresses the scalp irritation he may already be experiencing
4. Dermatologist recommended — the authority bias barrier is addressed
5. Doctor consultation included — removes protocol-switching risk
6. 10L+ users and Man Matters track record — social proof at scale
7. 93% reduced hairfall at Month 5–6 — outcome claim with a timeline attached

HOW TO TALK TO HIM

- He has done the research. Do not explain what Minoxidil is. Respect the knowledge he has already built.
- Frame it as an upgrade, never a correction or a restart. He is not doing it wrong — he is doing it at a ceiling that this product removes.
- Lead with the absorption gap. That is his hypothesis. Make it explicit before he has to voice it.
- Give the numbers early: 44%, 2–3x. He will verify them. When they hold up, you have him.
- Do not lead with emotion. Earn the emotion through science. This buyer converts on evidence, not aspiration.
- Timeline honesty is non-negotiable. He has been burned by slow timelines before. Specificity builds trust; vagueness kills it.

RETENTION MESSAGES

Phase	Message
Month 1–2 (Shedding phase)	"Shedding in the first 4–6 weeks is a documented, expected phase. It means follicles are cycling into active growth — not that the treatment is failing. You have seen this before. Stay the course."
Month 2–3 (Trust-building phase)	"CETOSOMAL® does not reset your timeline — it optimises it. The months you have already put in are compounding. More Minoxidil is now reaching the follicle every single day. Don't break the streak."
Month 3–4 (Early signal phase)	"If you see baby hair at this stage, that is the signal. If you don't, regrowth is still happening at the follicle level. Visible results follow at Month 5–6. The science is working even when the mirror isn't showing it yet."
Ongoing	"10L+ men have trusted this protocol. The difference between men who see results and men who don't is usually one thing: they didn't stop."

TAB 3: NARRATIVE × PERSONA

NARRATIVE FRAMEWORK — ADVANCED HAIR REGROWTH REGIME

NEVER MENTION

Do not use in any consumer-facing content for this product:

- "Guaranteed results" or "100% success"
- "Works in 30 days" or any accelerated timeline that is not clinically accurate
- "Cure for baldness" or permanent resolution language
- Any competitor brand names — do not name any
- Fake transformations or staged before/after comparisons
- Unrealistic promises or dramatic outcome language
- Overly clinical or fear-based language ("severe alopecia", "irreversible loss", "you're running out of time")
- Shaming men for choosing not to treat hair loss, or for being bald
- Skipping the shedding phase or glossing over the realistic timeline
- Any suggestion that a higher dose is needed, available, or a logical next step
- Any language that frames the buyer's existing treatment as wrong or wasted

Narrative A — The Upgrade

"You've been doing it right. Now make it reach."

JOB-TO-BE-DONE

The Treatment Optimizer wants to believe that their 6–15 months of consistent treatment was not wasted — and that a targeted, science-backed upgrade is all that stands between their current results and where they expected to be. The job is: validate the effort, explain the gap, close it.

HOOK OPTIONS

- "You've been applying Minoxidil every day. But how much of it is actually reaching your follicle?"
- "The problem was never your commitment. It was what happened between the dropper and the follicle."
- "Same ingredient. 44% more of it where it matters. That's CETOSOMAL®."
- "You have been consistent for a year. The formula hasn't been."

THE MANDATE

CETOSOMAL® is not a new drug. It is a better path for the same drug. Standard alcohol-based solutions have a delivery ceiling — a significant portion of the active Minoxidil never reaches the follicle. CETOSOMAL® is a patented carrier that penetrates 2–3x deeper and delivers 44% more active Minoxidil to the follicle vs alcohol-based solutions. Same molecule. Better journey. Existing treatment history compounds — it does not restart.

TIMELINE MILESTONE MAP

- Month 1–2: Hairfall starts to reduce. Shedding in this window is expected and normal.
- Month 3–4: Hairfall reduces further. Baby hair may start appearing.
- Month 5–6: Visible regrowth. Protocol is compounding.

RETENTION TRIGGER

"You have been consistent for months. CETOSOMAL® does not reset that — it amplifies it. Every drop you apply from today forward reaches further than it did yesterday."

Narrative B — The Absorption Gap

"Most of what you apply is being wasted."

JOB-TO-BE-DONE

The Treatment Optimizer wants a rational, evidence-based explanation for why results have been slower than expected — without being told to increase the dose or switch to a different drug. The job is: give them the answer they were already looking for, framed as a solvable problem.

HOOK OPTIONS

- "Standard Minoxidil topicals are alcohol-based. Alcohol-based carriers deliver less active ingredient to the follicle — that's the delivery gap."
- "You're applying 1ml every day. How much of it actually reaches the follicle?"
- "44% more Minoxidil delivered. No new ingredients. Better science."
- "The delivery gap is why your results plateaued — not your consistency."

THE MANDATE

Standard alcohol-based topicals have a hard delivery ceiling — less active Minoxidil reaches the follicle. CETOSOMAL® is a patented carrier that penetrates 2–3x deeper. 44% more active Minoxidil arrives at the follicle per application vs alcohol-based solutions. The dose has not changed. The delivery has.

COMPARISON ANCHOR

	Standard Alcohol-Based Minoxidil	Minoxifin Advance (CETOSOMAL®)
Carrier	Alcohol-based — delivery ceiling limits follicular absorption	CETOSOMAL® patented carrier — deeper penetration, more active ingredient delivered
Penetration depth	Surface-level	2–3x deeper
Minoxidil at follicle	Baseline — delivery ceiling applies	44% more active ingredient delivered
Scalp impact	Dryness, irritation, redness — adherence drops	Alcohol-free, hydrating — supports consistent daily use

RETENTION TRIGGER

"With alcohol-based Minoxidil, part of every dose never reaches the follicle. CETOSOMAL® closes that gap — from the first application."

Narrative C — Triple-Action Compound

"Three mechanisms. One protocol. No gaps."

JOB-TO-BE-DONE

The Treatment Optimizer wants a complete, systematic protocol — not a single-lever solution that leaves obvious gaps. The job is: show them that every angle of hair loss is now addressed, and that no gap in their current approach remains.

HOOK OPTIONS

- "You have been treating hair loss from one angle. The Advanced protocol covers three."
- "Topical. Internal. Mechanical. All three working in sync."
- "The Dermaroller is not an add-on. It is the third mechanism."
- "One protocol. Three actions. Nothing left unaddressed."

THE MANDATE

Hair loss requires simultaneous action on multiple vectors. Minoxifin Advance with CETOSOMAL® handles the follicular delivery layer — 44% more Minoxidil, 2–3x deeper, no alcohol. Biotin Gummies handle the systemic layer — strengthening hair structure and scalp health from the inside. The Dermaroller handles the mechanical layer — creating micro-channels that improve topical absorption, activating dormant follicles, and stimulating blood circulation. Three mechanisms. Synchronized. Compounding over time.

PROTOCOL TABLE

Mechanism	Component	Action
Topical — Follicular Delivery	Minoxifin Advance + CETOSOMAL®	44% more Minoxidil, 2–3x deeper penetration. Finasteride blocks DHT at the scalp level. Alcohol-free.
Internal — Systemic Support	Biotin Gummies	Biotin, Zinc, and Vitamins A, C, E support keratin structure and scalp health from within.
Mechanical — Channel Creation	Dermaroller (540 needles, 0.5mm)	Opens micro-channels before topical application. Activates dormant follicles. Stimulates blood circulation. Maximises absorption in every session.

RETENTION TRIGGER

"Most men address one vector and wonder why results plateau. The Advanced protocol addresses all three — and each mechanism makes the others more effective over time."
